

INFORMATION SYSTEMS

TECHNOLOGY AUDIT REPORT

Organization/Company Name: Werdys Kitchen

Audited System/Area: Werdys Kitchen Website

Audit Period: May 6, 2026 to June 5, 2026

Report Date: July 05, 2026

TABLE OF CONTENTS

1. Executive Summary
2. Introduction
3. Audited IT Environment Profile
4. Audit Findings and Recommendations
5. Action Plan
6. Overall Conclusion
7. Appendices

1. EXECUTIVE SUMMARY

The Werdys Kitchen Website Information System Audit was conducted to assess whether the website system has been running effectively in supporting the operational process of food ordering and customer transaction management. The Werdys Kitchen website is used to support food ordering activities through checkout forms, order tracking via email, management of transaction data and order status, as well as admin dashboards used to manage menus, monitor transactions, and run website operational activities. The results of the audit are expected to provide an overview of the effectiveness of system control and identify areas that still need improvement so that website operations can run more optimally.

1.1 Main Purpose of Audit

The main purpose of this audit is to assess the effectiveness of the control and operation of the Werdys Kitchen website in supporting business processes, including access security, customer transaction management, system functions, interface quality, website performance, and the reliability of supporting features based on evidence obtained through inquiry, observation, inspection, re-performance, CAATs, and sampling methods.

1.2 General Conclusion

In general, the Werdys Kitchen website has been able to support the main operational processes, such as admin login, customer checkout, order tracking via email, transaction status management, transaction data storage, and transaction history. However, the audit found several weaknesses that need improvement, especially in the reporting features, dashboard monitoring, website performance and stability, interface display, Contact Us integration, and data backup management so that the system can run more optimally, stable, and informative for users and admins.

1.3 Key Findings Highlights (High Risk)

1. The generate report feature is not yet able to generate transaction reports, the dashboard summary does not display real-time transaction data, and data backups have not been done periodically, reducing the effectiveness of monitoring and increasing the risk of data loss.
2. The website still experiences weaknesses in terms of stability and interface, namely the website can experience errors/crashes when bookings are made repeatedly in close proximity, the website logo does not appear on the navbar, the banner is cropping, the About Us information is incomplete, and the Contact Us feature still displays 404 errors.

1.4 Strategic Recommendations

Management needs to prioritize improvements to the generate report feature, dashboard summary, and data backup mechanism periodically, improve the stability and performance of the website when handling transactions, and improve the interface appearance and integration of the Contact Us feature for effective control and service quality.

2. INTRODUCTION

2.1 Background

Werdys Kitchen is a business engaged in selling food through the website. In supporting its operational activities, Werdys Kitchen uses a website that functions as a medium for food ordering, customer checkout forms, order tracking via email, and admin dashboards to manage menus, customer transactions, and order status. This information system audit is carried out as a form of evaluation of the effectiveness, reliability, and quality of the Werdys Kitchen website in supporting business operational processes. Based on the results of the available audit, the audit is focused on the main functions of the system, such as admin login, admin dashboard, sidebar and quick action, customer checkout process, order tracking via email, transaction data management, transaction history, generate report feature, dashboard summary, website interface display, system stability, and data backup mechanism.

In addition to assessing the suitability of system functions, this audit also aims to identify weaknesses in system control, especially in the generate report feature that cannot produce transaction reports, dashboard summary that does not display actual transaction data, website stability that still experiences errors or crashes when receiving repeated transactions, website interface display that is not optimal, integration of the Contact Us feature that still displays 404 errors, as well as managing data backups that have not been carried out regularly. With this audit, Werdys Kitchen is expected to be able to find out the actual condition of the system, understand the risks that still exist, and obtain recommendations for improvement so that the website can operate more optimally, stably, and be able to support operational needs in a sustainable manner.

2.2 Audit Objectives

Specifically, the purpose of the information system audit on the Werdys Kitchen website is as follows:

1. Assess the effectiveness of information system control in supporting the operational process of the Werdys Kitchen website.

2. Ensure the main functions of the website, such as admin login, customer checkout, order tracking via email, and management of ongoing transactions according to operational needs.
3. Assess the suitability of the implementation of system control based on COBIT, ISO/IEC 27001, and ISO/IEC 25010 standards used as audit references.
4. Identify weaknesses in security aspects, reporting features, dashboard monitoring, system performance, interface display, website feature integration, and data backup management.
5. Provide recommendations for improvement to improve the effectiveness, reliability, quality, and operational continuity of the website.

2.3 Scope

This audit includes an audit of the Werdys Kitchen website, including:

- Admin login and authentication process.
- Dashboard admin, sidebar, dan quick action.
- Management of menus and customer transactions.
- Form checkout pelanggan.
- Order tracking via email.
- Customer transaction history.
- Dashboard summary.
- Generate report feature.
- The interface of the website, including the navbar, banner, About Us page, and Contact Us.
- Stability and performance of the website when receiving transaction activity.
- Transaction data management and data backup mechanism.

2.4 Standards and Methodologies Used

Yes	Audit Standards	Domain	Used for
1	ISO/IEC 27001	Annex A.9 – Access Control	Control of admin access rights, login authentication, and user access security.

Yes	Audit Standards	Domain	Used for
2	ISO/IEC 27001	Annex A.9 – Session Management	Testing the auto logout mechanism on the admin dashboard to keep user sessions secure.
3	ISO/IEC 27001	Annex A.12 – Logging and Monitoring	Testing transaction history as well as monitoring system and admin activities.
4	COBIT	DSS01 – Manage Operations	Management of system operational processes, customer transactions, storage of transaction data, checkout, and transaction history.
5	COBIT	DSS04 – Manage Continuity	Evaluate the data backup mechanism and business <i>continuity</i> .
6	COBIT	APO01 – Manage IT Management Framework	Evaluate the operational management of the website, admin dashboard, sidebar, and system governance.
7	ISO/IEC 25010	Functional Suitability	Testing the suitability of system functions, such as order tracking, generate reports, dashboard summary, and Contact Us.
8	ISO/IEC 25010	Usability	Evaluate the ease of use as well as the identity and information on the website interface, such as the logo and the About Us page.
9	ISO/IEC 25010	User Interface Aesthetics	Evaluate the quality of the interface display, especially website banners that are <i>cropping</i> .
10	ISO/IEC 25010	Performance Efficiency	Testing the performance and stability of the website when receiving repeated transactions (<i>stress/load condition</i>).

The methodology for collecting audit evidence is carried out through several methods, namely inquiry (interview with admin), observation (direct observation of system activity), inspection (checking data, features, and system output), re-performance (re-testing of the main function of the website), CAATs (Computer Assisted Audit Techniques) to check transaction data and admin dashboard, and sampling (purposive sampling) to test the consistency of changes in customer transaction status.

3. AUDITED IT ENVIRONMENT PROFILE

3.1 System/Process Description

The Werdys Kitchen website is a web-based food ordering system used to support the online customer ordering process. Through this website, customers can choose a food menu, fill in order data through the checkout form, and track orders via email. The website is also equipped with an admin dashboard that is used to manage menus, monitor customer transactions, change order status, view transaction history, and monitor website operational activities.

3.2 Key IT Assets

1. The Werdys Kitchen website is the main application used by customers to view food menus, place orders, and track orders.
2. The Admin Dashboard is a medium for menu management, customer transactions, order status, dashboard summary, and generate report features.
3. Customer Transaction Data as data that stores customer transaction information, transaction history, and order status managed through the admin dashboard.
4. Order Tracking System via Email as a feature used by customers to find out the progress of order status.
5. Customer Order Form data containing customer information, such as name, address, WhatsApp number, email, and notes used in the checkout process.

3.3 Stakeholders

1. The owner of Werdys Kitchen as the owner of the business process and the party responsible for the operation of the website.
2. Website Admin as the party that manages menus, customer transactions, changes in order status, and operational activities through the admin dashboard.
3. Customers as website users who order food, fill out checkout forms, and track via email.
4. The Auditor Team as the party that conducts an audit of the effectiveness of control, system function, website quality, and operational suitability.

4. AUDIT FINDINGS AND RECOMMENDATIONS

Based on the results of evidence collection through inquiry, observation, inspection, re-performance, CAATs, and sampling methods, most of the main functions of the Werdys Kitchen website have been running well, such as admin login, customer checkout, order tracking via email, transaction status management, and transaction history storage.

Finding 1: Data Backups Haven't Been Done Regularly

Finding 1	Description
Risk Level	High
Condition	Based on the results of the inquiry with the admin, data backups on the Werdys Kitchen website have not been carried out periodically so that the auditor cannot verify the data recovery process directly.
Criteria	Based on ISO/IEC 27001 Annex A.12 (Backup), organizations need to implement backup procedures on a regular basis to ensure data availability in the event of a system outage.
Cause	There is no mechanism or procedure for data backup that is applied periodically to the system.
Impact / Risk (Effect)	In the event of data loss or system disruption, the data recovery process has the potential to be slow and increase the risk of losing customer transaction data.
Recommendation	Management needs to implement a data backup mechanism periodically accompanied by documentation of backup schedules, storage media, and periodic data recovery tests.
Management Response	Management accepts the auditor's recommendations and will begin to develop a data backup mechanism on a regular basis to improve the reliability of the system.

Finding 2: The Generate Report feature is not working yet

Finding 2	Description
Risk Level	High
Condition	The results of observation, inspection, re-performance, and CAATs show that the Generate Report feature has not been able to generate transaction reports.
Criteria	Based on ISO/IEC 25010 – Functional Suitability, the system function must be able to produce outputs according to user needs.
Cause	The reporting feature on the admin dashboard has not been optimally integrated with transaction data.
Impact / Risk (Effect)	Admins cannot obtain transaction reports automatically, making the monitoring and reporting process less effective.
Recommendation	Made improvements to the generate report function to be able to generate transaction reports automatically according to the data stored in the system.
Management Response	Management receives the auditor's recommendation and will develop the generate report feature.

Finding 3: Dashboard Summary Doesn't Display Actual Data

Finding 3	Description
Risk Level	Moderate
Condition	The dashboard summary does not display transaction data in real time so that information such as the number of products sold and orders processed do not change following the transaction.
Criteria	Based on ISO/IEC 25010 – Functional Suitability, the information displayed by the system must be in accordance with actual operational conditions.
Cause	The integration of dashboard monitoring with transaction data has not been running optimally.
Impact / Risk (Effect)	Admins do not obtain accurate operational information so that the transaction monitoring process becomes less effective.
Recommendation	Improve dashboard summary integration so that all information is updated automatically based on transactions that occur.
Management Response	Management approves the auditor's recommendations and will improve the monitoring dashboard to display actual data.

Finding 4: Website Interface Display Is Not Optimal

Finding 4	Description
Risk Level	Moderate
Condition	The audit found that the website logo did not appear on the navbar, the banner was cropping so that the image was cropped, and the About Us page did not display complete business information.
Criteria	Based on ISO/IEC 25010 on the aspects of Usability and User Interface Aesthetics, the interface display must provide complete information and be easy to use by the user.
Cause	The management of the website interface has not been done optimally.
Impact / Risk (Effect)	The quality of the user experience decreases and information about the business is not fully conveyed to customers.
Recommendation	Improve the appearance of the website by improving the logo, banner, and completing information on the About Us page.
Management Response	Management accepts the auditor's recommendations and will make updates to the website's appearance.

Finding 5: Contact Us Feature Integration Not Working

Finding 5	Description
Risk Level	Moderate
Condition	The social media link in the Contact Us feature still displays a 404 error so that users cannot access social media through the website.
Criteria	Based on ISO/IEC 25010 – Functional Suitability, every function provided by the system must run according to its intended use.
Cause	The configuration or integration of social media links has not been done correctly.
Impact / Risk (Effect)	Users have difficulty contacting Werdys Kitchen through social media so that it can reduce the quality of service.
Recommendation	Perform configuration improvements to all social media links in the Contact Us feature and ensure that all links are properly accessible.
Management Response	Management accepts the auditor's recommendations and will improve the integration of the Contact Us feature.

Finding 6: Website Stability Is Not Optimal During Recurring Transactions

Finding 6	Description
Risk Level	High
Condition	The re-performance results show that the website experiences an error/crash when repeated orders are made in the same time using the desktop so that the system must be refreshed and wait about 10 minutes before it can be used again.
Criteria	Based on ISO/IEC 25010 – Performance Efficiency, the system must be able to maintain stable performance while accepting workloads according to operational needs.
Cause	The system's performance is not yet able to handle repetitive transaction activities optimally.
Impact / Risk (Effect)	Website operational disruptions, delays in service to customers, and decreased system reliability when there is an increase in transaction activity.
Recommendation	Evaluate and optimize website performance, including load testing and improve system resource management so that the website remains stable when receiving a higher number of transactions.
Management Response	Management receives the auditor's recommendations and will evaluate the performance of the system to improve the stability of the website.

5. ACTION PLAN

Yes	Reference Findings	Action Plan	Person in Charge	Target Time	Status
1	Finding 1 – Data backups have not been done regularly	Set a database backup schedule periodically (daily or weekly) and store a copy of the data on a backup media or <i>cloud storage</i> .	Owner of Werdys Kitchen	30-Nov-26	Open
2	Finding 2 – Generate Report is not working yet	Made improvements to the Generate Report feature to automatically generate transaction reports and perform tests after repairs are completed.	Owner of Werdys Kitchen	15-Dec-26	Open
3	Finding 3 – Dashboard Summary does not yet display actual data	Improved dashboard integration with databases so that transaction data can be displayed in <i>real-time</i> .	Owner of Werdys Kitchen	15-Dec-26	Open
4	Finding 4 – Website crashes during repeated transactions	Optimize website performance through program code improvements, database optimization, and performance testing to improve system stability.	Owner of Werdys Kitchen	31-Dec-26	Open

Yes	Reference Findings	Action Plan	Person in Charge	Target Time	Status
5	Finding 5 – Website logo not showing up on the navbar	Fixed the configuration of the website's display so that the logo can be displayed correctly on the entire page.	Owner of Werdys Kitchen	20-Nov-26	Open
6	Finding 6 – Website banners experience <i>cropping</i>	Adjust banner size and page layout so that images can be displayed proportionally on different devices.	Owner of Werdys Kitchen	20-Nov-26	Open
7	Finding 7 – The About Us page is incomplete	Complete business profile information, brief history, vision, mission, and other supporting information on the About Us page.	Owner of Werdys Kitchen	15-Nov-26	Open
8	Finding 8 – Contact Us Link returns 404 error	Update your social media links and make sure all links on the Contact Us page point to an active official account.	Owner of Werdys Kitchen	20-Nov-26	Open

6. OVERALL CONCLUSION

The audit of the Werdys Kitchen website was carried out using the methods of Inquiry, Observation, Inspection, Re-performance, Computer Assisted Audit Techniques (CAATs), and Sampling. The audit results show that in general, the system has sufficient control to support business operational processes, especially in the process of admin authentication, menu management, customer bookings, transaction data storage, order status tracking, and transaction history presentation. Most of the controls tested have met the criteria referring to ISO/IEC 27001, COBIT, and ISO/IEC 25010, so the main functions of the website have been carried out according to operational needs.

The audit results also show that there are still several weaknesses that require follow-up, including the lack of a periodic data backup mechanism, the non-functioning of the Generate Report feature, dashboard summaries that do not display actual transaction data, and still problems in the system performance aspect when the website receives repeated transactions. Shortcomings are also found in aspects of the user interface, such as website logos that do not appear on the navbar, banners that are cropping, About Us pages that do not contain complete information, and links on the Contact Us page that still generate 404 errors. These findings have the potential to affect operational effectiveness, service quality, and user experience if improvements are not made immediately.

The auditor's opinion states that the Werdys Kitchen website has adequate controls, but still requires minor to medium improvements in terms of functionality, performance, data security, and user interface quality. The implementation of the improvement recommendations that have been prepared is expected to be able to improve the reliability of the system, support operational sustainability, minimize risks that may occur, and improve the quality of service to customers. The implementation of all these recommendations is expected to make the Werdys Kitchen website more effective, efficient, safe, and able to support business processes in a sustainable manner.

7. APPENDICES

7.1 List of Interviewees

Name of Resource Person	Departments	Role in Audit
Owner of Werdys Kitchen	Owner / Admin Website	Provide information about website management, business processes, transaction management, system security, and website operations.

7.2 List of Revised Policy Documents

Yes	Revised Document/Object	Remarks
1	Dashboard Admin	Website and transaction operations management
2	Login Admin	User authentication mechanism
3	Sidebar Dashboard	Navigation system admin
4	Quick Action Dashboard	Quick navigation features
5	Form Checkout Pelanggan	Customer data input
6	Customer Transaction Data	Transaction data storage
7	Transaction History	Monitoring of transaction activity
8	Order Tracking	Order status tracking via email
9	Generate Report	Creation of transaction reports
10	Dashboard Summary	Summary of transaction activity
11	Navbar Website	Website identity
12	Banner Website	Main page view
13	Halaman About Us	Business profile information

Yes	Revised Document/Object	Remarks
14	Halaman Contact Us	Social media integration and contact information

7.3 Evidence of Findings

Inspection*

Evidence ID	Description of Evidence
INS-01	Screenshot dashboard admin
INS-02	Screenshot sidebar admin
INS-03	Screenshot quick action dashboard
INS-04	Screenshot form checkout pelanggan
INS-05	Screenshot of admin-side customer transaction data
INS-06	Screenshot of admin-side customer transaction history
INS-07	Screenshot of order tracking via email
INS-08	Screenshot of the generate report button
INS-09	Screenshot navbar website
INS-10	Screenshot banner website
INS-11	Screenshot halaman About Us
INS-12	Screenshot of error 404 on Contact Us

Re-Performance*

Evidence ID	Description of Evidence
REP-01	Screenshot of admin login successful
REP-02	Screenshot sidebar admin
REP-03	Screenshot quick action dashboard
REP-04	Screenshot auto logout admin
REP-05	Screenshot form checkout pelanggan
REP-06	Email order tracking screenshot
REP-07	Screenshot of customer transaction history
REP-08	Screenshot generate report gagal
REP-09	Screenshot dashboard summary admin
REP-10	Website screenshot encounters error/crash when booking is repeated

CAATs*

Evidence ID	Description of Evidence
CAT-01	Screenshot of customer transaction history
CAT-02	Screenshot dashboard summary admin
CAT-03	Screenshot generate report gagal
CAT-04	Screenshot of transaction data on admin dashboard
CAT-05	Screenshot of customer order form data

Sampling*

Evidence ID	Description of Evidence
SMP-01	Screenshot of Pending status on admin dashboard
SMP-02	Screenshot of Pending status on customer tracking page
SMP-03	Screenshot of the Processing status on the admin dashboard
SMP-04	Screenshot of the Processing status on the customer tracking page
SMP-05	Screenshot of Completed status on admin dashboard
SMP-06	Screenshot of the Completed status on the customer tracking page
SMP-07	Screenshot of Cancelled status on admin dashboard
SMP-08	Screenshot of Cancelled status on customer tracking page

7.4 Glossary/Glossary

Terms	Definition
CAATs	<i>Computer Assisted Audit Techniques</i> , which are computer-assisted audit techniques to analyze data and evaluate information systems.

Terms	Definition
Dashboard	The main page of the system that displays a summary of information and operational activities.
Generate Report	A feature used to generate transaction reports automatically.
Backup Data	The process of making a copy of the data to prevent information loss due to system corruption or device failure.
Dashboard Summary	A summary of transaction information displayed on the admin dashboard.
Auto Logout	A security mechanism that automatically terminates a user's session after a certain period of inactivity.
